

The image below is of black panels with black frames. We would change our design to include panels that look like this rather than commercial panels that have a silver frame.

In order to change to black panels with black frames we will have to change the number of panels to 19 or 21. That will result in the array shape in the picture below. This is drawn in our design software. The white lines around the panels are only visible in the picture, not in the actual array. Please refer back to the 1st picture.

Looking at the array from the front

The image below is of the inverter, which is a box that will hang on the wall near the existing meter. That is the larger box. The box on the left is the rapid shutdown/disconnect box.

Same picture just from farther away
