## **INTRODUCTION**

Proper accounting for capital fixed assets is required by generally accepted accounting principles to obtain an unqualified opinion on the financial statements. It is also required by the Government Finance Officers' Association and is an essential ingredient in obtaining a Certificate of Achievement for Excellence in Financial Reporting. Capital assets accounting can also assist in planning for replacements and insurance coverage. To properly implement Governmental Accounting Standards Board Statement Number 34, Basic Financial Statements and Management's Discussion and Analysis for State and Local Governments, the County must account for its capital assets.

GASB Statement 34 defines the term *capital assets* to include: land, improvements to land, easements, buildings, building improvements, vehicles, machinery, equipment, works of art and historical treasures, infrastructure, and all other tangible or intangible assets that are used in operations and that have initial useful lives extending beyond a single reporting period. *Infrastructure assets* are long-lived capital assets that normally are stationary in nature and normally can be preserved for a significantly greater number of years than most capital assets. Examples of infrastructure assets include roads, bridges, tunnels, drainage systems, water and sewer systems, dams, and lighting systems. Buildings, except those that are an ancillary part of a network of infrastructure assets, should not be considered infrastructure assets for purposes of Statement 34.

## **CAPITAL ASSETS**

In conformity with generally accepted accounting principles, guidelines of Government Accounting, Auditing and Financial Reporting (GAAFR) and the Government Finance Officers' Association (GFOA), Louisa County requires that for an asset to be capitalized it must be tangible in nature, have a life longer than one year, and have a significant value. Capital assets should be reported at historical cost. The cost of a capital asset should include capitalized interest and ancillary charges necessary to place the asset into its intended location and condition for use. Ancillary charges include costs that are directly attributable to asset acquisition—such as freight and transportation charges, site preparation costs, and professional fees. Donated capital assets should be reported at their estimated fair value at the time of acquisition plus ancillary charges, if any.

The costs of normal maintenance and repairs that do not add to the value of the asset or materially extend asset lives are not capitalized. Improvements are capitalized over the remaining useful lives of the related fixed assets, as applicable.

Each capital asset is categorized and placed within a class of similar assets. Assets are classified as follows:

Land

Building and improvements

Machinery and equipment

A description of each asset classification follows:

**Land** - The land capitalized fixed asset account should include all land and land rights purchased or otherwise acquired by the County. The cost of land should include all legal and title fees, surveying fees, appraisal and negotiation fees, site preparation costs, and the cost of razing unwanted structures. Donated land should be recorded at fair market value at the time of donation. If land is acquired with a building as a single parcel, the value of the land should be determined at the time of the purchase and carried in the land fixed asset account. Where the historical cost of land is not available, historical cost values have been determined through construction costs indices to determine estimated historical cost, or estimated costs if construction costs indices are not available.

**Easements** - An easement is an interest in land owned by another that entitles its holder to a specific limited use or enjoyment (right to use the land). Therefore, easements are not required to be reported in the financial statements unless the entity paid for the easement.

**Buildings and improvements** - The building fixed asset account should include the value of all buildings at original purchase price or cost of construction. All structures used by the County to house or safeguard equipment, services, people and functions should be included. All fixtures permanently attached to the building which cannot be removed without impairing the value of the building are considered part of the building. A donated building should be recorded at fair market value at the time of donation. Additions and improvements to buildings including heating and ventilating systems, should be added to the building account when these costs are considered permanent additions and they exceed the capitalization thresholds.

Improvements includes the cost of site improvements, whether or not a building exists. These items usually include fencing, irrigation systems, signs, outdoor bleachers, park improvements, walls and foundations.

Where the historical cost of a building is not available, historical cost values have been determined through use of “backtrending”. In “backtrending” the historical cost of an asset is estimated by taking the current cost of a similar asset and dividing it by construction cost indices to determine estimated historical cost. In cases where construction cost indices are not available estimates were made.

**Machinery and equipment** -The machinery and equipment fixed asset account group includes all machinery, power equipment, electronic data processing equipment, contractor's equipment, communication equipment, audio visual equipment, photographic equipment, kitchen equipment, laboratory, medical, duplication and photocopying equipment, mowers, yard equipment and motor vehicles. These assets include property that does not lose its identity when removed from its location and is not expended in use. The property is recorded at cost, including freight, installation, and other charges incurred to place the asset in service. If machinery or equipment is acquired through donation, the appraised value of the asset shall be established at the date of donation and used as the asset cost.

Equipment has a significant value in and of itself and must be individually listed as an asset unit of one and given a unique asset number. Other identifying information such as make, model, serial number, size, capacity, material etc., as it applies, is recorded as part of the item description.

**Construction in Progress** - Construction in progress should be capitalized and not depreciated.

It should be reported with land and other non-depreciating assets at the government-wide level. Unspent debt proceeds from capital assets related debt should be reported in the net assets section of the statement of net assets as “restricted for capital projects.”

**Works of Art and Historical Treasures** - Works of Art and Historical Treasures should be recorded at historical costs. Depreciation is not required for collections or works of art that are inexhaustible. The Implementation Guide to GASB Statement 34 provides the following definition:

*Inexhaustible collections or individual works of art or historical treasures are those with extraordinarily long useful lives. Because of their cultural, aesthetic, or historical value, the holder of the asset (or assets) applies efforts to protect and preserve the asset in a manner greater than that for similar assets without such cultural, aesthetic, or historical value.*

## **CAPITALIZATION POLICY**

All purchased fixed assets are valued at cost where historical records are available and at an estimated historical cost where no historical records exist. Donated fixed assets are valued at their estimated fair market value on the date received.

Fixed assets to be recorded to the land, building and improvements, machinery and equipment, and construction in progress classifications are to cost \$10,000 ~~5,000~~ or greater, with the following exceptions:

All land, buildings and vehicles are recorded.

Major additions, including those that significantly prolong a fixed asset's economic life or expand its usefulness, should be capitalized. Normal repairs that merely maintain the asset in its present condition ~~should be not be~~ should not be capitalized. Generally, renovations or improvements to existing buildings will be expensed unless the cost of the project exceeds \$100,000.

## **ACCOUNTING PROCEDURES FOR CAPITAL ASSETS**

All assets acquired through June 30, 2001 will be valued at historical cost, as available, and by the use of backtrending as described above. Asset values will be determined using financial audit reports and accounting records. When original cost is not available asset values will be determined by the use of construction indices and other formulas designed to reflect historical cost.

**Additions** - All fixed assets purchased during the fiscal year, old and new, as well as all donated assets and assets acquired through capitalized leases are defined as current year additions. When an existing fixed asset has capitalizable additions, the additional costs must be added to the original cost of the asset.

Procedures to capture current year additions include a detailed audit of charges to capital outlay and capital project accounts by obtaining purchase orders/invoices/and other documentation supporting disbursements above the threshold amounts. Once criteria for determining an addition for fixed assets has been made the capital asset maintenance worksheet is prepared. Currently capital asset details are maintained on a spreadsheet and will be updated by designated County officials annually.

Capital assets may be acquired by eminent domain through condemnation proceedings. While the major part of the costs of these assets are the awards set by the court, the legal and recording fees must also be included.

**Replacements** - Replacements are assets acquired to replace previously capitalized assets which are being sold, abandoned, or otherwise disposed of. The replacement asset(s) is entered

into the capital assets system in the same manner as a new asset. The asset(s) being replaced is removed from the records as described under dispositions.

**Dispositions** - All dispositions sold, traded-in, scrapped, abandoned or in any way removed from service during the current fiscal year are classified as dispositions or disposals. Upon retirement, or other disposal, the acquisition cost of the asset is removed from the fixed asset account in which the acquisition cost was recorded when acquired.

Audits of proceeds from various auctions, sale of surplus vehicles, and sale of salvage/surplus will be used to determine dispositions.

**Transfers** - A transfer is defined as any movement of an asset by virtue of change in location, either by account, department, building, floor, or room. This change in location and/or managerial responsibility must be recorded in the fixed asset system. As the essential identifying information about the transferred asset is already contained in the system on inventory lists, it is only necessary to change those data fields affected.

**Maintenance** - Maintenance refers to expenses that are necessary to achieve efficiency and neither materially prolong the original life nor appreciably increase the value of the asset. Maintenance expenses are not capitalized, but are considered current period expenditures.

**Permanent additions** - Improvements, including permanent additions, provide significant enhancement to an asset through an extended life cycle, increased productivity and/or efficiency, expansion of existing units, or addition of new units. The cost of such improvements is capitalized when it is \$~~10,000~~5,000 depending on the asset class.

Alterations are changes in the physical structure or arrangement of capital assets which do not qualify as increases in capital assets under the definitions of permanent additions. The cost of alterations should not be capitalized.

### **Annual capital asset inventory**

Each department head will inventory all fixed assets under his/her control. Blank Capital asset inventory forms will be supplied each department head.

The following information will be maintained in subsidiary records for each individual capital asset:

- Major asset class;
- Funding source of property;\*
- Function
- Organization unit charged with custody
- Reference to acquisition source document
- Location;
- Acquisition date;\*
- Fund and account from which purchased
- Name and address of vendor;\*
- Estimated useful life;\*
- Description of asset;
- Date, method and authorization
- Manufacturer's serial number model
- Tag number (if applicable) number or other identification number

\*information to be obtained where available

The following functions will be utilized to report capital assets:

- General government administration
- Judicial administration
- Public safety
- Public works
- Health and welfare
- Education
- Parks, recreation and cultural
- Community development

The following activities will be utilized to report capital assets:

- |                                                       |                                                     |
|-------------------------------------------------------|-----------------------------------------------------|
| <input type="checkbox"/> Board of Supervisors_____    | <input type="checkbox"/> Planning                   |
| <input type="checkbox"/> County Administrator_____    | <input type="checkbox"/> Education                  |
| <input type="checkbox"/> Central Accounting_____      | <input type="checkbox"/> Clerk of the Circuit Court |
| <input type="checkbox"/> Treasurer_____               | <input type="checkbox"/> Commonwealth Attorney      |

| <input type="checkbox"/> Circuit Court_____           | <input type="checkbox"/> Registrar                  |
| <input type="checkbox"/> Parks and recreation_____    | <input type="checkbox"/> Community development      |

Transaction Date - The date an asset is capitalized is the date the asset is placed in service.

For most assets this will generally be the date the asset was purchased. For buildings, this will be the date the building was occupied or otherwise placed in service. These guidelines are applicable for additions as well as deletions and disposals. The key date is the day the asset was placed in or removed from service.

Depreciation - Capital assets should be depreciated over their estimated useful lives unless they are either inexhaustible or are infrastructure assets reported using the modified approach. Inexhaustible capital assets such as land and land improvements should not be depreciated.

Depreciation expense should be reported in the statement of activities. Depreciation expense should be measured by allocating the net cost of depreciable assets (historical cost less estimated salvage value) over their estimated useful lives in a systematic and rational manner.

Depreciation is the process of allocating the cost of tangible property over a period of time, rather than deducting the cost as an expense in the year of acquisition. Generally, at the end of an assets's life, the sum of the amounts charged for depreciation in each accounting period

(accumulated depreciation) will equal original cost less salvage value. Good accounting and financial management practices require that a government entity take both the cost expiration and the declining value of an asset into consideration. The cost expiration of a government entity's assets must be recognized if the cost of providing services is to be realistically reported. Also, the decline in the value of those assets must be considered if the government entity's net assets are to be stated correctly.

To calculate depreciation on a capital asset, the following five factors must be known:

- the date the asset was placed in service
- the asset's cost or acquisition value
- the asset's salvage value
- the asset's estimated useful life, and
- the depreciation method.

The County depreciates all assets using the straight-line method and assumes no salvage value.

Estimated Service Life - Life is the mean or normally expected duration of an asset. Life estimates are required for all asset units except land and land rights. Any extended life resulting from a major change in the asset unit is specified at the time of the change. The following estimated lives can be used as general guidelines:

|                                                     | <b><u>General<br/>Life<br/>(Years)</u></b> |
|-----------------------------------------------------|--------------------------------------------|
| <i>Building and Improvements</i>                    |                                            |
| Permanent buildings . . . . .                       | 40                                         |
| Mobile classrooms . . . . .                         | 10                                         |
| Recreation facility i.e. concession stand . . . . . | 10                                         |
| Land improvements - groundwork . . . . .            | 30                                         |
| <i>Machinery and equipment</i>                      |                                            |
| Audio Visual . . . . .                              | 10                                         |

|                                                |    |
|------------------------------------------------|----|

|                                                                                         |    |
|-----------------------------------------------------------------------------------------|----|
| Base stations, mobile and hand transmitters, other<br>communication equipment . . . . . | 10 |
|-----------------------------------------------------------------------------------------|----|

*Furniture, Fixtures, Office Equipment*

|                                          |   |
|------------------------------------------|---|
| Office furniture . . . . .               | 5 |
| Copiers, duplicating equipment . . . . . | 5 |

Financial Reporting - Capital assets that are being or have been depreciated should be reported net of accumulated depreciation in the statement of net assets. Accumulated depreciation may be reported on the face of the statement or disclosed in the notes. Capital assets that are not being depreciated, such as land or infrastructure assets reported using the modified approach should be reported separately if the government has a significant amount of these assets. Capital assets also may be reported in greater detail, such as by major class of asset (for example, infrastructure, buildings and improvements, vehicles, machinery and equipment).
